

425 BC

Aristophenes 'ACITAR NIANS'

425 BC \pm 25 yrs

Cal

Greek Cal.

Evidence shows at this early time
that the Cal. (Greek) was already
no longer tied in with the
phases of the moon. The cities
rather intercalated months and
added or omitted days at will
to adjust the Cal. to the course
of the SUN and STARS and also

for the sake of convenience (to postpone
an advanced festival without changing
its traditional Cal. date). The Calendic New
moon could disagree by many
days with the True new moon.
